Sequence 2, Application US/09728721
Patent No. US20020061845A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Bertin, John
TITLE OF INVENTION: NOVEL MOLECULES OF THE CARD-RELATED PROTEIN FAMILY AND USES THERE
FILE REFERENCE: 07334-124001
CURRENT PAPLICATION NUMBER: US/09/728,721
CURRENT FILING DATE: 2000-12-01
PRIOR APPLICATION NUMBER: 09/340,620
PRIOR APPLICATION NUMBER: US 09/207,359
PRIOR FILING DATE: 1998-10-08
PRIOR FILING DATE: 1998-06-17

[2] SEQUENCE FROM N.A., AND MUTAGENESIS OF LYS-47. TISSUE=Endothelial cells;

SUBCELLULAR LOCATION: Cytoplasmic (Probable).
TISSUE SPECIFICITY: Detected in heart, brain, placenta, lung, peripheral blood leukocytes, spleen, kidney, testis, prostate, pancreas and lymph node.

receptor complex.

-!- PTM: Autophosphorylated. -!- SIMILARITY: Belongs to the Ser/Thr family of protein kinases. -!- SIMILARITY: Contains 1 CARD domain.

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903 (2002).
-!- FUNCTION: Activates pro-caspase-1 and pro-caspase-8. Potentiates
CASP-8-mediated apoptosis. Activates NF-kappaB.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SUBUNIT: Binds to CFLAR/CLARP and CASPI via their CARD domains.
Binds to BIRC3/C-1API and BIRC3/C-1AP2, TRAFI, TRAF2, TRAF5 and
TRAF6. May be a component of both the TNFRSF1 and TNRFSF5/CD40
                                                                                                                              MEDINE-98381580; PubMed-9705938;

This CDS clone is a part of a collection of human full-length

expression clones generated by Harvard Institute of Proteomics.

Each CDS has been cloned without stop-codon (to allow fusion with

C-terminal tag). The CDS has been directionally cloned using BD

In-Fusion (TW) cloning system between the Sall and HindIII sites of

the pDNR-Dual vector. Additional sequences in the clone: 'ACC'

sequence; 'GG' after last codon and before HindIII site to maintain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1479

Compositions for identifying apoptosis signaling pathway inhibitors useful for treating diseases.

Claim 6; Page; 93pp; English.

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during. CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and composations for screening compounds which will modulate the interactions of the various compositions identified ARC, RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug

```
apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8. Identification of ARC-like inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS; neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for dispnostically measuring RICK levels. A specific inhibitor of an essential step in the blochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates. Note: This sequence was created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 116
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RICK; human; RIP-like interacting CLARP kinase; apoptosis regulator; ARC; caspase-8; caspase-10; CD95 signalling; apoptosis signalling pathway; CIDE-A; CIDE-B; DREP-1; diagnosis; cell growth; apoptosis dysregulation; gene therapy; cardiac disorder; cancer; neurodegenerative disorder; AIDS; aplastic anaemia; ischaemic injury; toxin-induced liver disease.

This sequence is a fragment of the human RICK (RIP-like interacting CLARP kinase) protein of the invention. RICK acts as a positive regulator of this apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling apoptosis induced by caspase-8 and caspase-10 apoptosis signalling. The invention provides methods for identifying compositions for screening compounds which will modulate the interactions of the various compositions identified aRC, RICK, and the CIDE family of activators (CDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in drug creening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vittor cell system can be used to contain the inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapoutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnositically, measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to apoptosis factors are potential drug candidates. Note: This sequence was a essential drug apoptosis is the preparation of the preparation of a created using information given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  310
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          311 LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 370

This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New B1 protein regulates cell death and cell survival pathways - derivatives, DNA and antibodies, also regulate intracellular inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           373 LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 432

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is the human RICK (RIP-like interacting CLARP kinase)

Co fapoptosis, potentiating apoptosis induced by caspase-8 and caspase-10

during CD95 signalling. The invention provides methods for identifying

apoptosis signalling pathway inhibitors and activators, and methods and

compositions for screening compounds which will modulate the interactions

CC activators (CIDE-A, CIDE-B and DREP-1). RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening

compositions identified: ACC, RICK, and the CIDE family of

activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening

compositions complexes containing RICK and CLARP can be used in drug

co asays for agents, useful in the diagnosis, prognosis or treatment of

disease associated with excess cell growth and dysregulation of

conpositions. Overexpression of ARC in an in vitro cell system can be used

co identify inhibitors of the enzymacic activity of caspase-B

co identify inhibitors of the enzymacic activity of caspase-B

co identification of ARC-like inhibitory compounds may be useful for gene

therapy treatment of disease with increased cell death in muscle tissue

condition of a disease with increased cell death in muscle tissue

condition and for diagnostically measuring RICK levels. A specific inhibitor

condition and for diagnostically measuring RICK levels. A specific inhibitor

condition with intracellular factors such as CLARP and FADD appears to

be essential for apoptosis, inhibitors of RICK binding to intracellular

conditions are poptential drug candidates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LSRKAQDCYFMKLHHCPGNHSWDSTISGSQRAAFCDHKTTPCSSAIINPLSTAGNSERLQ 124

                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY68769-95 and AAY68797-99 represent human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased HSPP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP expression/activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            64

for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, NCK-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human cellular kinase RICK protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 433 PGIAQOWIQSKREDIVNOMTEACLNOSLDALLSRDLIMKEDYELVSTKPTRTSKVRQLLD 492
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antisense oligonucleotide that targets regions of a nucleic acid
encoding human receptor interacting protein (RIP)2, for treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PGIAQQWIQSKREDIVNQMTEACLNQSLDALLSRDLIMKEDYELVSTKPTRTSKVRQLLD 184
                                                                                                                                                                                 present invention relates to a new method for identifying compounds
                                        Identifying agents for treatment or prevention of cytomegalovirus infection, comprises contacting test compound with cellular kinase and detecting change in cellular kinase activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               313 KLQSVSSAIHLCDKKKKMELSINIPVNHGPQEESCGSSQLHENSGSPETSRSLPAPQDNDF

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      엄
                                                                                                                                                                                                                        clones. 830 cDNA molecule persociation and the protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA molecules have been determined. Primers for synthesised by the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did form part of the printed specification, but was obtained in CD-ROM format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 372

                                             The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 protein

This invention describes the isolation of novel human caspase recruitment domain, CARD-3 and CARD-4 polymucleotides and proteins and a partial comutine CARD-4 protain and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase activation are involved in the regulation of caspase activation. The caspase and antibodies can be used in screening assays, detection assays, predictive methods may be used to disponse and treat patients which are suffering cardivity of the TNF receptor complex, abnormal activity of the TNF receptor complex, or abnormal activity of a caspase. Captured and prophylactic methods which are suffering activity of the TNF receptor complex, or abnormal activity of a caspase. Captured with mutations in p53 and hormone-captured may be treated include cancer (particularly follicular lymphoma, carcinomas associated with mutations in p53 and hormone-captured associated with mutations in p53 and hormone-captured may be used include cancer (particularly follicular supering associated with mutations in p53 and hormone-captured spidenate tumours), autoimmune disorders (e.g. systemic lupus carcinomas associated with mutations in p53 and hormone-captured spidenate spidenate spidenate distance and sister and stroke.

Alzheimar's disease, parkinson's disease, amyorchophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke.

CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and cell survival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 and CARD-4 encodes CARD-4 splice variants, CARD-4 and CARD-42. This sequence compounds which modulation described and activated in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel CARD-3 and CARD-4 genes and polypeptides used or treating regulation of cellular proliferation and differentiation and cell survival.

Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and hematological disorders.

Claim 9; Fig 2; 208pp; English.

The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated cDNA clone (see AAF30001). Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. using expression or activity of GARD-3, CARD-4, CARD-5 or CARD-6 e.g. using ene therapy methods. Such disorders include cancer, viral infection, autoimmune disorders and immune disorders. CARD-3, -4, -5 and -6 proteins can be used to regulate cell proliferation, cell survival and proteins can be used to regulate cell proliferation, cell survival and cell growth. They can also be used to screen drugs or compounds that modulate their activity or excessive production of CARD-3, -4, -5 or -6 protein, or production of an aberrant protein

```

The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitment domain (CARD)-4£ (long form) polypeptide with a by contacting the polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LARD (leucine rich repeat) domain of CARD-4. Also included is a method of

```
identifying a candidate compound for modulating LPS (lipopolysaccharide)-
mediated activation of nuclear factor-kappa B (NF-kB), by providing a
cell expressing a polypeptide comprising the LRR domain of CARD-4 and
harbouring LPS, exposing the cell to a test compound and measuring NF-kB
activation, where altered NF-kB activation polypeptide in the presence of
the test compound compared to the binding in the absence of the test
compound indicates that the test compound is a candidate compound for
modulating LPS-mediated activation of NF-kB. Modulators identified by
compound indicates that the test compound is a candidate compound for
modulating LPS-mediated activation of NF-kB. Modulators identified by
compound indicates that a disorder characterised by abstract CARD-4
protein or nucleic acid. Compounds that modulate the activity of CARD-4
care useful to treat or diagnose disorders such as cancer, viral
infections, autoimmune disorders e.g. systemic lupus erythematosus,
immune-mediated glomerulonephritis and arthritis, immune disorders, such
as multiple sclerosis, Hashimoto's thyroiditis, acopic conditions such as
as multiple sclerosis, Hashimoto's thyroiditis, acopic conditions such as
as multiple sclerosis, and lepromatous leprosy, disorders of cell signaling and
tuberculosis, and lepromatous leprosy, disorders of cell signaling and
disorders of tissues. The present sequence represents human CARD-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        492

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may be supplementing the patient's own production of CARD. Disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and hormone-dependent tumours such as brass cancer, prostate cancer, and ovarian cancer, autoimmune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections cured by herspes viruses, poxviruses, and adenoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anemia and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention
                                                                                                                                            Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     432
